

The EU 100 Flowetch Mini combines the low cost of the EU 100 with the semi-automatic, bottom-marking method of the Flowetch series. Manual voltage controls make it simple to change the voltage, while stencil life is increased greatly by constant rinsing due to the bottom-marking nature of this machine. Each system includes the EU 100 marking control unit, a pneumatic system, electrolyte recycling basin, and a securing fixture for the stencil and product to be marked. This system provides a fast, reliable, and low-cost entry into the semi-automatic electrolytic etching field.

## Advantages

- Non-erosive electrolytes
- Non-smearing permanent marking
- No part deformation
- High-quality permanent marks
- Affordable

## Specifications

Input Voltage	115V or 230V AC
Output Voltage	0V - 24V (AC / DC)
Max Power	100VA
Air Pressure	4 bar
Dimensions	16.5 x 10.25 x 16.0 in. (L x W x H)
Weight	28.5 lbs.

## Special Accessories

- Special marking heads
- Counter
